SMS 1.6 revision 4

Soumis par redrum
05-03-2006

EEUG a fait les modifications suivantes sur les dernières versions de SMS:

Update (21-FEB-2006)

- an attempt to fix "can't browse folders" bug;
  (thanks to everybody involved in this discovery);
- an attempt to fix "files on USB device are not selectable" bug;
- added possibility to decrease screen height in "display settings" ->
  "advanced settings" menu (thanks to "Voldemar_u2" for suggestion);

Update (22-FEB-2006)

- fixed "Display subtitles" checkmark issue in player menu;
- fixed error reporting issue (too long messages leave onscreen artefacts);
- changed IOP reset routine (thanks to "dlanor" for the research/note);
- disabled internal queue locks by removing -DLOCK_QUEUES macro from the
  Makefile (it appears that queue locks are not needed since threads are
  non-preemptive anyway);

Update (23-FEB-2006)

- changed loader code in attempt to fix "hangings" upon exit to
  user defined aplication;

Update (03-MAR-2006)

- fixed incorrect subtitle position for multiline subtitles (thanks to
  "Voldemar_u2" for the note);
- sound made louder a bit (SPU2 volume values are adjusted);
- changed character indentation;
- added separate management for image offsets in different video modes
  (thanks to "Mr. Worm~~" and "Voldemar_u2" for the suggestion);
- added sound effects to the browser (for errors, usb/host mount/unmount
  and file/folder actions) - rather silly, just for demonstration of some
  SPU2 ADPCM decoding features;
- fixed a "crash" issue with some mp3 files (thanks to "sigmar" for the
  research/note);
