

XboxMediaCenter (XBMC) 2005-10-30 CVS build

Soumis par redrum
02-11-2005

Il va encore falloir mettre à jour vos xbox! Une nouvelle compilation du CVS de XBMC est disponible grâce à T3CH. Au menu depuis la dernière version:

- * added: [1336095] new playselected(position) python function, plays a certain item from the current playlist, thanks to nicko2k.
 - * added: Paths to \$homedir's default screenshot folder in My Pictures and \$homedir's default path to recordings (Shoutcast rips) in xboxmediacenter.xml.
 - * added: if videos are stacked, imdb query will look for "stackedname.nfo" for url
 - * added: progress dialog when opening a multipath bookmark (only supported by music)
 - * added: Basic support for Last.fm radio including trackinfo and albumcovers, place the lastfm:// url in a .strm file to play. No love/ban. Skip works but not very nicely. There is an option in general audio settings to en/disable submitting last.fm tracks to your last.fm profile. Note that you must have entered your audioscrobbler/last.fm username/password to play last.fm radio.
 - * added: you can now choose which 60hz modes you want to use with the game region overrider.
 - * added: pal 60 support to game region overrider.
 - * added: better testing of dvd urls (D:, iso9660://, udf://) in GetMatchingShare
 - * updated: German, Spanish, Italian, German (Austrian), Norwegian language file
 - * updated/rewrote: itunes DAAP client to not use global buffering, but actually stream the file to player. XDAAP updated to libopendaap 0.4.0.
 - * changed: show current bitrate for vbr mp3 instead of average bitrate. (needs new MadCodec.dll, also works with renamed in_mp3.dll)
 - * changed: reorganized the program settings a little.
 - * fixed: [1341077] English language string had a invalid closing tag (Thnx to blittan)
 - * fixed: filerar will now fail immediately if it tries to cache files bigger than 2 gig (since fat-x can't handle it anyway).
 - * fixed: display of squares and/or dots for track albumname and crashes sometimes when there was no albumtag in the file.
 - * fixed: occasional crash between songs when codec info is displayed
 - * fixed: no bitrate information for last.fm streams
 - * fixed: possible thread synchronisation problems in python
 - * fixed: possible crash at exit of xbmc because of deadlocks in filezilla
 - * fixed: SITE runxbe in ftp server
 - * fixed: auto game region would lead to an infinite reboot-loop on ntsc systems
 - * fixed: Slideshow-screensaver start when video is paused cause hang (1313900) [GeminiServer]
 - * fixed: auto game region now works everywhere again.
 - * fixed: DAAP directories wasn't displaying local characters like å,ä,ö,û... correctly
 - * fixed: GetMatchingShare failing due to forward slash & backslash incompatibility
 - * fixed: erroneous error messages being reported in log
- "ERROR CUtil::GetMatchingShare... no matching bookmark found for [/]"
"ERROR CVirtualDirectory::GetDirectory() matches no valid bookmark, getting root bookmark list instead"
